# Individual Combinations, Optimum Flexibility

The flexible ZK-modular system offers different combination possibilities in order to construct the optimal compressor station. This enables individual customer requirements to be processed fast and efficiently.

The principle of this system enables the entire program of standard oil-free compressors to be incorporated.

Standard components and modules are employed from our existing compressor stations and are used in any configuration so an individual and economical solution can be realised without delay.

## Depending upon application:

- oil-free compressor solutions are available with free air delivery rates of between 25 l/min and 300 l/min and can be supplied with a variety of motor options 1-Phase, 3-Phase or DC.

- Standard air receiver sizes are available from 10 l to 90 l.

- Different types of control gear with pressure switch, manual or auto condensate, starting sphere or starter solenoid are available as well as safety relief valve pressure gauge and mains cable.

- A large selection of accessories such as pressure hoses, hours run meters, air intake filters, pressure reducing valves and quick release couplings.

Select the configuration for your requirements and contact us to discuss with our sales engineers a solution according to your specification.

We also specialise in developing and building tailor made systems to individual customer specifications. Developing working partnerships with our customers ensures a perfect finished product.
